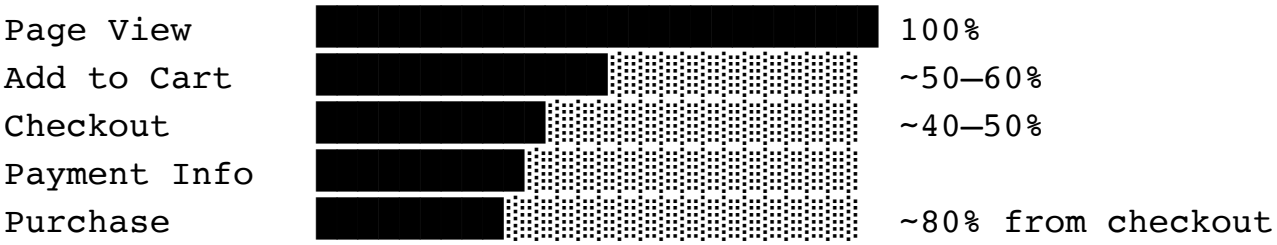
📊 Funnel & Revenue Analysis Report

🧠 Overview

This analysis explores user behaviour across the funnel, evaluates marketing channel performance, and identifies key revenue drivers. The goal is simple: **optimise conversions, reduce wasted spend, and scale what works.**

🔄 Funnel Performance



🔍 Key Insight

- The **Checkout → Purchase conversion (~80%+)** is extremely strong
  👉 This indicates a **frictionless payment experience**

Row	view_to_cart_rate	cart_to_checkout...	checkout_to_pay...	payment_to_purc...	total_conversion_...
1	31.0	71.0	81.0	92.0	17.0

Row	stage_1_page_view	stage_2_add_to_...	stage_3_checkou...	stage_4_payment...	stage_5_purchase
1	4268	1332	951	768	708

✅ Recommendation

- **Do not touch the checkout flow** — it's already performing at a high level
- Any redesign here = unnecessary risk

📣 Marketing Performance

Traffic vs Conversion

Channel	Traffic Share	Conversion Rate
Social Media	~30%	~6%
Email	Lower	~13%

Row	traffic_source	views	carts	purchases	cart_CR	purchases_CR	cart_to_purchase...
1	organic	1750	576	300	33.0	17.0	52.0
2	paid_ads	820	305	173	37.0	21.0	57.0
3	email	445	280	151	63.0	34.0	54.0
4	social	1253	171	84	14.0	7.0	49.0

🔍 Key Insights

- Social Media drives **volume but low intent** → lots of "window shoppers"
- Email delivers **high-intent users** → significantly better conversion

🚀 Recommendations

1. Rethink Social Media Strategy

- Shift focus from **Traffic campaigns → Retargeting / Lead Gen**
- Reduce spend on low-converting acquisition

2. Double Down on Email

- Implement **email capture pop-ups**
- Convert anonymous traffic into **owned audience**

💡 *Once users enter the email funnel, they are far more likely to convert later.*

⏱️ Time to Conversion

Row	converted_users	avg_view_to_cart...	avg_cart_to_purc...	avg_total_journey...
1	708	11.19	13.36	24.55

🔍 Insight

- The time between:
  - Page View → Add to Cart
  - Add to Cart → Purchase

is **consistent and realistic**

👉 This suggests:

- Users are **engaged**
- No major friction in the buying journey

✅ Conclusion

- The purchase process is **smooth and efficient**

💰 Revenue & Profitability

Row	total_visitors	total_buyers	total_revenue	total_orders	avg_order_value	revenue_per_buyer	revenue_per_visitor
1	4268	708	76037.93	708	107.4	107.4	17.82

Key Metric

- **Average Order Value (AOV):** ~$115

⚠️ Critical Insight

Customer Acquisition Cost (CAC) must stay under control:

```
If CAC > $30–$40 (especially on Social) → ❌ Likely unprofitable
```

🚀 Recommendations

- Set a **strict CAC threshold**
- Continuously monitor **channel-level profitability**
- Cut or optimize campaigns that exceed acceptable CAC

🧩 Final Takeaways

- 🟢 Checkout flow = **excellent → don't touch**
- 🟡 Social Media = **high traffic, low efficiency → optimize**
- 🟢 Email = **high ROI → scale aggressively**
- 🟢 Funnel timing = **healthy user behavior**
- 🔴 Profitability depends on **controlling CAC**

🚀 Next Steps

- Build **retargeting pipelines**
- Optimize **email capture & automation**
- Introduce **conversion rate tracking by cohort**
- Monitor **LTV vs CAC** for long-term growth
